

Do you know “useful parts” made of silicon?

SPR(Silicone Protection Ring) is a hidden solution to improve the quality of frames. It can prevent the lens corner from chipping or from the lens getting loose.

Size/Design Variations

Please put SPR on the groove of the lens. The photo shows SPR “already in”.

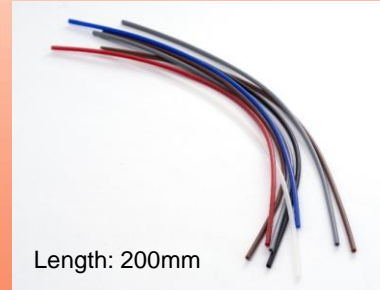

This ring is very strong, so it does not break-off very easily. (OK against 400g pulling force.)

Original colors are available.

SPT200(Silicone Protection Tube) reduces pain behind the ear caused by all metal temples without temple tips. Please cut it to the desired length.

This tube has a slit, which enables you to attach temples of various sizes. Please open the slit at the end of the tube and place the temple there. After that, please insert and attach it.
