

# Silicone between CW FLEX

We offer you this time flexible metal templates with colorful silicone components in between. Combination of 2 layers (1mm in thickness) of metal sheet and silicone components realize modern-looking, slim and flexible templates. Why not try this template if you are looking for something new and fun?

Silicone components can be made in 2 different colors.

Combine a silicone component and 2 metal layers, then insert a long template tip to the temple.
