Make your glasses more functional and attractive with Beta titanium sheet temples!

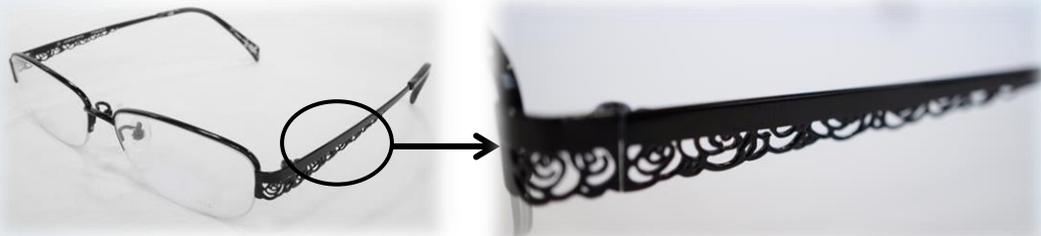

Light, flexible beta titanium sheet temples are highly reputed in the current market. However, design could be limited because laser cutting and punching processes cannot realize **“three dimensional designs”**. We have multiple solutions to achieve designs which used to be difficult.

Example

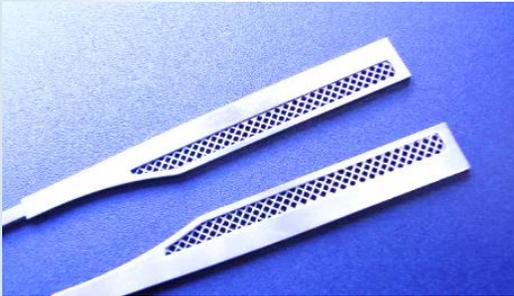

It is possible to make **“three dimensional design”** which is usually difficult by laser cutting.

It is also possible to make complicated designs like characters.

The combination of different processes like milling, wire cutting, chemical cutting, laser cutting can make it possible to produce various designs.
