

# ZDC (Zinc Die Casting)

Die-casting can be processed into complex shapes at a low cost. Moreover, it can be plated and painted with colors. It is ideal for decorating because zinc has good luster.

**Good Luster!**

**Cost reduction!**

**Plated and painted colors are also available!**

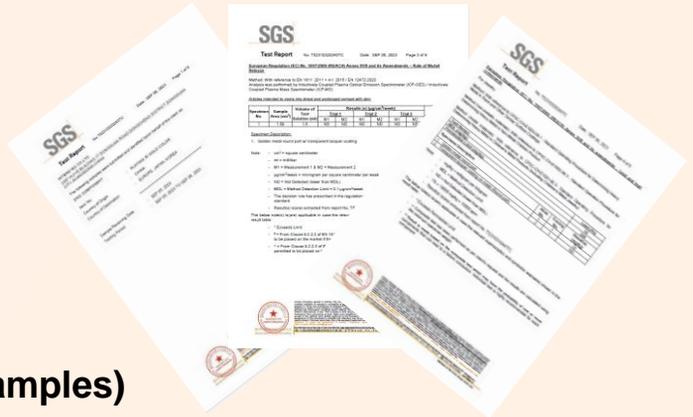

# What is ZDC(Zinc Die Casting)?

Zinc has a low melting point of around 420 degrees Celsius. The melted zinc will be molded by injection. This makes it possible for us to process the parts into complex shapes with high accuracy.

## Product feature

- ➔ Zinc is a metal that is easy to polish.  
A beautiful luster can be produced that is essential for eyeglass parts.
- ➔ Plated and painted colors are also available. The standard specification is to pass a 48-hour sweat resistance test.
- ➔ Zinc cannot be soldered.  
We recommend using zinc parts as decoration parts by insertion or assembling.
- ➔ Zinc products with plated and painted colors comply with REACH regulations.
