

ADR with metal sheet front

ADR (Acetate Decoration Ring) series has been well-received. We are introducing two designs, which use a combination of metal sheet front, with a pattern, and lamination acetate sheets. In the first design, a different acetate sheet is laminated on the top of the brow. In the second design, a two-layer acetate sheet is used. The acetate colors are different across the metal sheet front. You can make the temples in the same colors as the front.

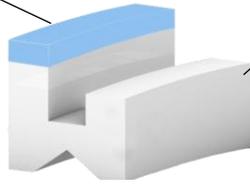

Metal sheet front

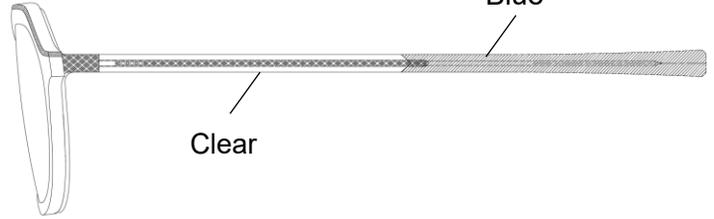

The front is made of stainless steel or beta titanium sheets. The pattern is created by etching. You can make the temples with the same pattern as the front.
