

Silicone Air Modan

Silicone temple tips have a comfortable fit. Silicone Air Modan is hollow at the end for even greater comfort. The hollow space is completely enclosed so the cleaning solution does not get into the temple tip during cleaning.

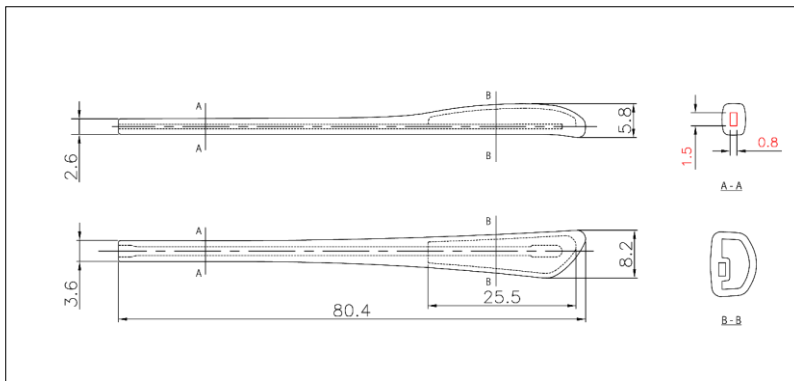

SAM-01

The following two kinds of samples are available.

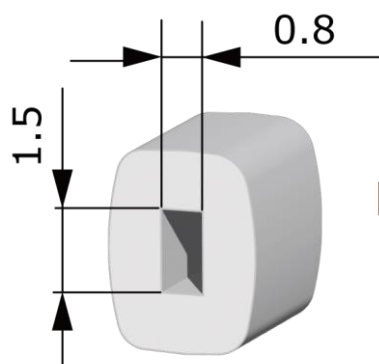

- Front and back side: Black
- Front: Black / Back side: Clear

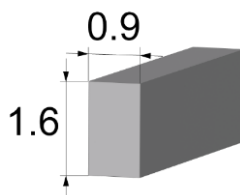

To prevent temple tips from twisting easily!

Silicone temple tips can twist easily because of the high elasticity of the material. As a solution to the twisting, we recommend the wire core dimensions being bigger by 1.0mm than the opening of the temple tip.

Opening cross-sectional dimensions of SAM-01

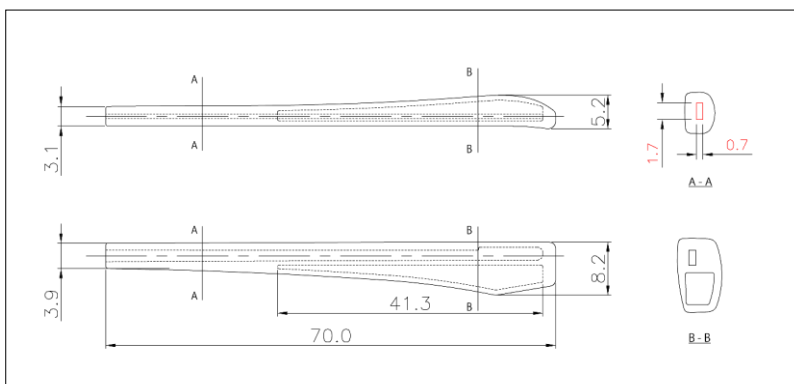

Recommended core cross-sectional dimensions

Note: To allow you to experience the resistance to twisting, we have temples that are actually made to the recommended dimensions.

SAM-02

The following two kinds of samples are available

- Front and back side: Black
- Front: Black / Back side: Clear

Note: When you use the temple tip, we recommend making the core shape 1.8×0.8 mm, which is the opening size of the temple tip + 0.1 mm.

Original designs are also available. Please feel free to contact to us.
