

3DAL (3D Acetate Lamination) applies high-precision 3D cutting, creating shadows and depth within the acetate sheets. We can make not only the acetate sheets for the fronts, but also the acetate sheets for temples and temple tips. The shading created inside the sheet produces a unique three-dimensional effect, making it possible to create distinctive acetate frames.

A blue piece appears to be floating inside the temple tip

Zebra pattern

Fabric-look check pattern

It features "EV" logos.

Sample frames are available.
